

BÖLLHOFF

RIVKLE®

Blind rivet nuts and studs

A medium shot of a man with short brown hair and a slight beard, wearing clear safety glasses and a bright blue polo shirt. He is leaning forward, smiling at the camera while working on a piece of machinery. The background shows industrial equipment, including a large blue cabinet and a red metal structure.

An optimized assembly solution for improved performance

RELIABILITY

■ Controlled setting

The technologies implemented in Böllhoff tools allow you to make sure that 100% of the RIVKLE® fasteners are conforming after setting.

■ Components comply with the rules applicable to threaded joints

Obtain robust assemblies thanks to components which, after setting, are comparable to class 8 nuts (or even class 10 or 12 for HRT versions) or to class 8.8 screws (stud version).

After setting, RIVKLE® blind rivet nuts comply with the rules applicable to threaded joints. These rules guarantee, among other things, that in the case of over-tightening, the screw will fail, leaving the nut re-usable.

SIMPLICITY

■ A safe and environmentally-friendly solution

Reduce your environmental costs with this assembly solution which requires no exhaust or cooling.

■ Minimal equipment and expertise required

You can easily integrate the RIVKLE® solution into your production process, as it does not require your operators to have any particular qualifications or safety equipment.

■ Simple to use

The RIVKLE® technology can be integrated quickly and easily thanks to easy-to-use setting methods and simple tool adjustment procedures.

An optimized assembly solution for improved performance

PERFORMANCE

A repeatable solution

Ensure the reliability of your assemblies by using components with a repeatable setting behavior in combination with setting tools with well-known repeatability ($CPk > 1.66$).

A competitive global solution

Reduce the costs of your assemblies thanks to a cost per installed RIVKLE® fastener that is usually more competitive than alternative solutions with reduced costs in manpower, energy, maintenance, investment, floor area.

VERSATILITY

RIVKLE® can be set at every stage of your production process

You can integrate RIVKLE® at any stage of your production process, either before or after surface coating. In fact, the RIVKLE® components are supplied with a surface treatment which complies with the strictest customer requirements, and the setting operation does not alter the support or the component's surface treatment.

Moreover, as the RIVKLE® components can be set either with hand tools or with automatic setting units on robots, the RIVKLE® technology can fit into all your production environments.

Compatibility with all application materials

The RIVKLE® components are compatible with metal (steel, light alloys) as well as polymers (composites, plastics, etc.).

Installation with access from only one side

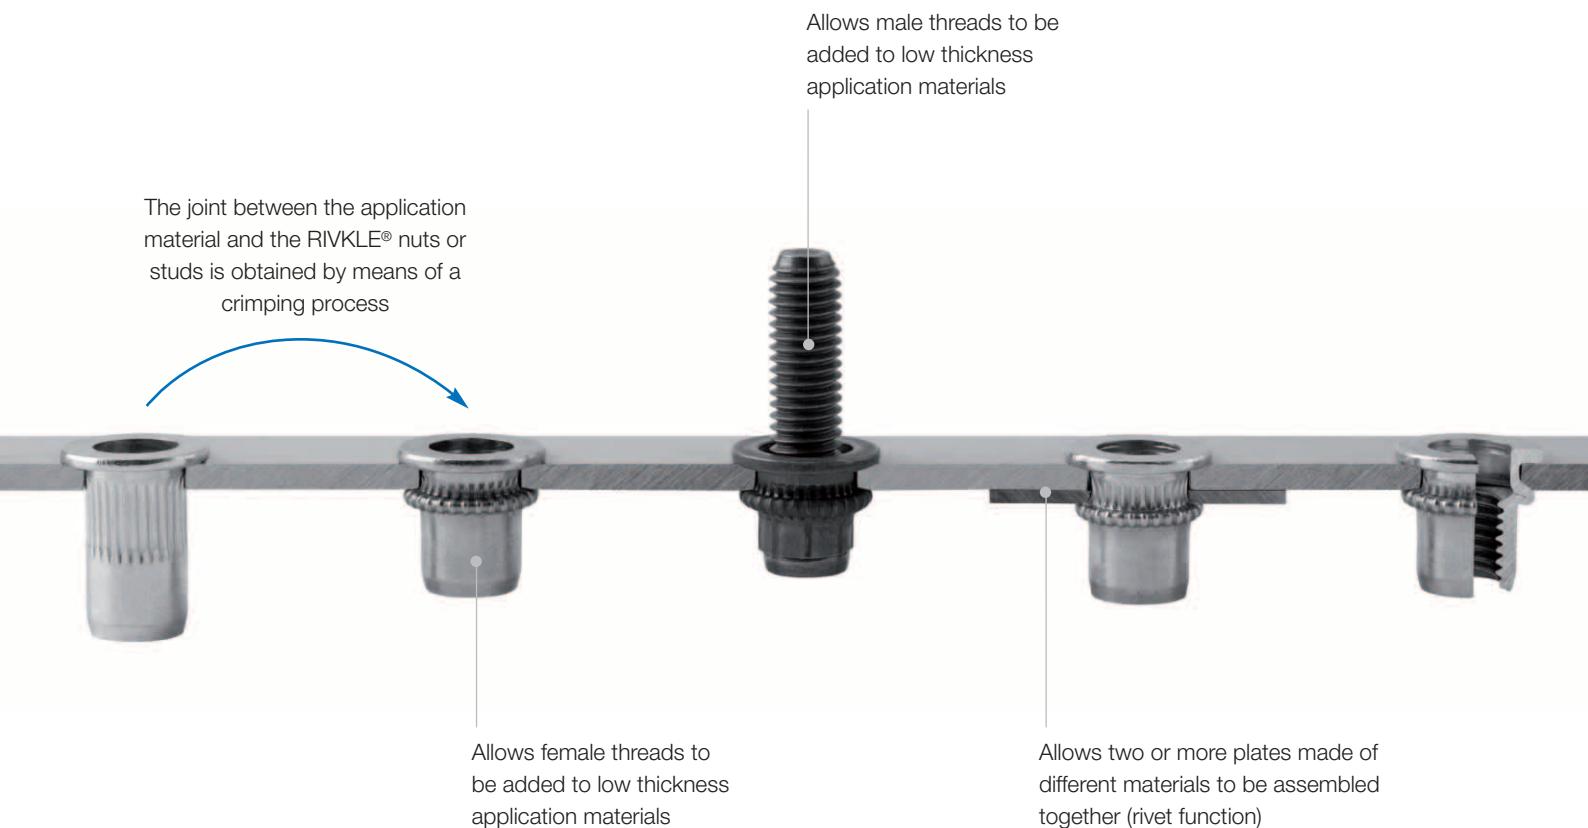

Simplify your design and integrate RIVKLE® into many of your applications, as these fasteners can be installed with access on only one side.

The dimensions and the accessibility of your parts do not hinder the use of the RIVKLE® solution.

The RIVKLE® technology

RIVKLE® blind rivet nuts and studs are the most versatile solutions to add reusable high-strength male or female threads to low thickness application materials.

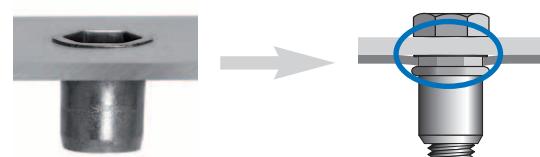

Under normal conditions of use

Thin head

To optimise the protrusion of thin heads after setting and ensure optimum penetration strength, Böllhoff decided to use the extra-flat heads already implemented in most of the steel or stainless steel thin-head fasteners.

Extra-flat thin head

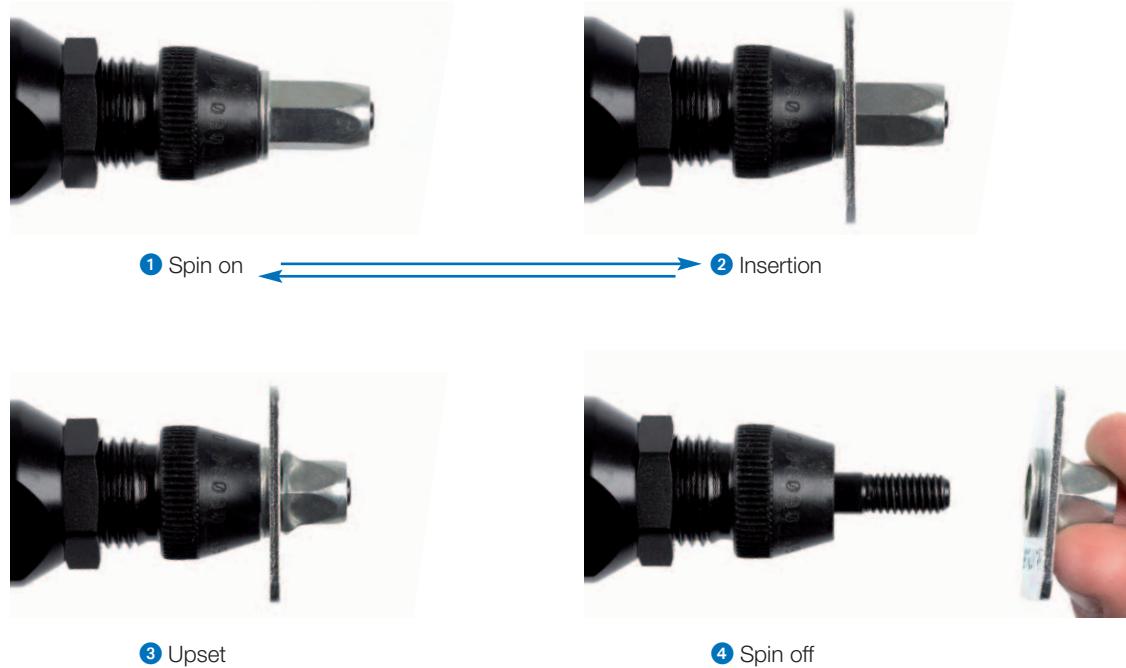

Setting of RIVKLE® fasteners

Pull setting method

The Böllhoff setting tools use the pull setting method to set the RIVKLE® assembly components.

This method consists of 4 steps

- ① (or ②) Spin on
- ② (or ①) Insertion of the component into the support
- ③ Upset
- ④ Spin off

Our pressure setting method

Today, all the Böllhoff setting tools use the pressure setting method. With this setting method, a tension force is applied in order to generate the deformation of the RIVKLE®.

Advantages

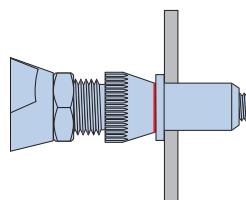

- Ensures a constant setting quality, particularly for applications with variable thicknesses.
- Allows the use of preventive controls.
- Quick and simple adjustment of the setting tools.
- Prevents damage to the setting tool or the RIVKLE® in the event of a 2nd setting cycle.
- Increased mandrel life.

Setting of RIVKLE® fasteners

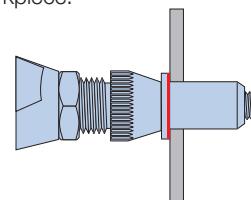

Setting parameters

There are four required conditions for proper adjustment of a RIVKLE® fastener:

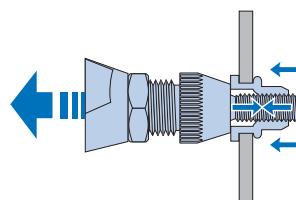

1. Make sure the RIVKLE® fastener touches the anvil: this means that "spin on" has been performed until the head of the RIVKLE® fastener touches the anvil.

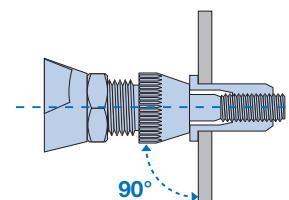

2. Make sure the RIVKLE® fastener touches the workpiece: check that the rear face of the head of the RIVKLE® fastener lies flat against the surface of the workpiece.

3. Apply the recommended setting force: adjustment and check should be done using the force controller specifically designed for our hand setting tools (integrated for automatic adjustment).

4. Make sure the tool is perpendicular to the surface of the workpiece: check that the top of the tool is and remains aligned with the centreline of the thread during the spin on, setting and spin off steps.

Recommended setting force

Böllhoff has determined a recommended setting force for every RIVKLE® product.

This recommended setting force is defined to ensure:

- proper installation of the product throughout its entire setting range
- no "re-setting" of the product when the bolt is screwed in

To limit the need for tool adjustment, Böllhoff develops its products in such a way that a recommended force is achieved for each diameter.

Installation force range per diameter & RIVKLE® material

	Steel Force in kN	Stainless steel Force in kN	Stainless steel A4 Force in kN	Aluminium Force in kN
M3	3,5	3,5	-	1,9
M4	5,5	5,5	9,5	3,0
M5	8,0	8,0	12,0	3,8
M6	12,0	13,0	15,0	5,5
M8	18,0	20,0	20,0	10,0
M10	21,0	22,0	-	12,0
M12	23,0	38,0	-	15,0
M14	50,0	-	-	-

For the ranges of RIVKLE® fasteners with additional functions, you will find the associated setting forces in the relevant product pages.

RIVKLE® – Material and surface treatment

Our standard surface treatment, Zn 8K+; 8 to 15 µm; provides the highest corrosion resistance in the standard market (400 hours to Red Rust according to ISO9227). For the most demanding applications, ZnNi8A/Fe; 8 to 15 µm, can be supplemented with either a lubricant and/or reinforcement to reach 720 or even 1000 hours to Red Rust.

RIVKLE® – Standard blind rivet nuts - Stainless steel

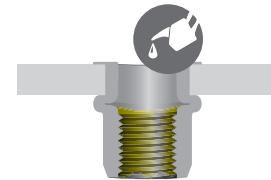

Industrial markets are constantly changing, bringing new applications and new customer needs.

In order to support our customers and answer at best to their needs, BÖLLHOFF has renewed and developed a dedicated stainless steel range.

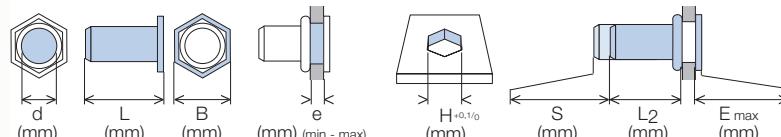

RIVKLE® Stainless steel - Lubricated range

The lubricated range is based on standard products on which a lubricant has been applied to limit galling issues.

Customers don't need anymore to add manually any lubricant product (paste, spray, oil...).

RIVKLE® – Standard blind rivet studs - Steel

Advantages

- Allows you to hold the part to be screwed onto the stud in position (vertical installation, heavy or bulky part, etc.)
- Creates a reusable thread equivalent to a Class 8.8 bolt
- Keep enjoying the advantages of a simple and quick installation process with access from only one side

RIVKLE® HRT – High Resistance Thread

For absolute robustness

High strength and reduced dimensions for your structural assemblies.

This blind rivet nut was designed to provide high-strength female threads after setting while retaining optimum dimensions.

Advantages

- Extend the use of blind rivet nuts to applications involving high mechanical stresses.
- Add high-strength female threads to complex parts allowing access from only one side.
- In its aluminium version, this rivet nut provides full compatibility with class 8.8 screws.

Permissible loads

Class 12,9 compatibility upon request.

Setting forces*

M6	232 91 060 502	14 000	-
M8	232 91 080 504	24 000	-
	232 91 080 505	24 000	27 000
M10	232 91 100 503	38 000	42 000
	232 91 100 501	38 000	42 000
M12x1,5	232 91 124 501	55 000	61 000

*The recommended setting force depends on the characteristics of the assembly.

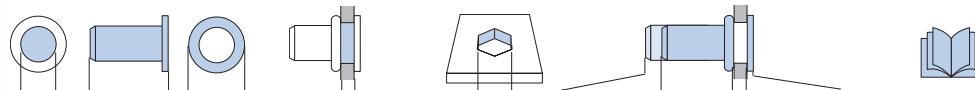

To prevent any re-setting of the RIVKLE® HRT fastener during the installation of the bolt, we recommend to apply a setting load in accordance with the tension applied to the bolt.

In certain cases, it is possible to reduce these loads, contact Böllhoff to obtain further information.

RIVKLE® HRT - Aluminum

Aluminium HRT | Flat head | Hexagonal | Open

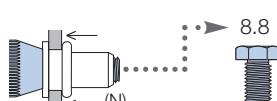

M5	18,1	14,0	0,5 - 3,0	7,0	S=6,5-e	11,0	1,0	232 90 050 501	✓

Optimized for aluminium and magnesium workpieces.

Weight saving and corrosion resistant solutions for external applications.

Setting forces*

M5	232 90 050 501	12 000
M6	232 40 060 030	12 000
M8	232 40 080 030	18 000

RIVKLE® SFC nuts and studs – For fiber-reinforced polymer

The key to light assemblies

An advantage for weight saving in vehicles.

This rivet nut adds a high-strength female thread in polymer materials without causing damage to the application material. RIVKLE® SFC is suitable for flexible and brittle materials and can be integrated into any plastic parts without the need for particular precautions. After setting, thanks to its specific deformation, the bulge ensures uniform distribution of the grip forces.

Advantages

- Make simpler designs without worrying about the edge distances of your parts
- Use wider tolerances when drilling the holes (relief angle, etc.)
- No more constraints regarding the compatibility between the materials and the assembly components

Permissible loads

M6	12 000 N	RIVKLE® reusable*	15 000 N
M8	18 000 N	RIVKLE® reusable*	27 000 N
Similar performance to standard RIVKLE®			

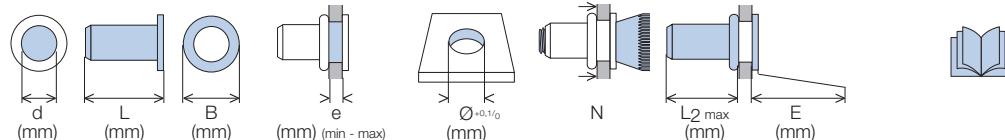

*RIVKLE® is more resistant than screw property class 8.8

Coating: ① = Zn8K+/Fe ; ② = ZnNi8A/Fe

① ②

RIVKLE® SFC is fully compatible with the whole Böllhoff RIVKLE® setting tool range (including fully automatic installation for mass production).

Available in alternative configurations upon request (stud, underhead seal, etc.).

Grip range could be increased in certain specific conditions when associated with substrate material in these cases a prototype validation will be necessary. (Please contact us).

RIVKLE® PN – Ultimate pull-out force

The universal solution for supports with extreme variations

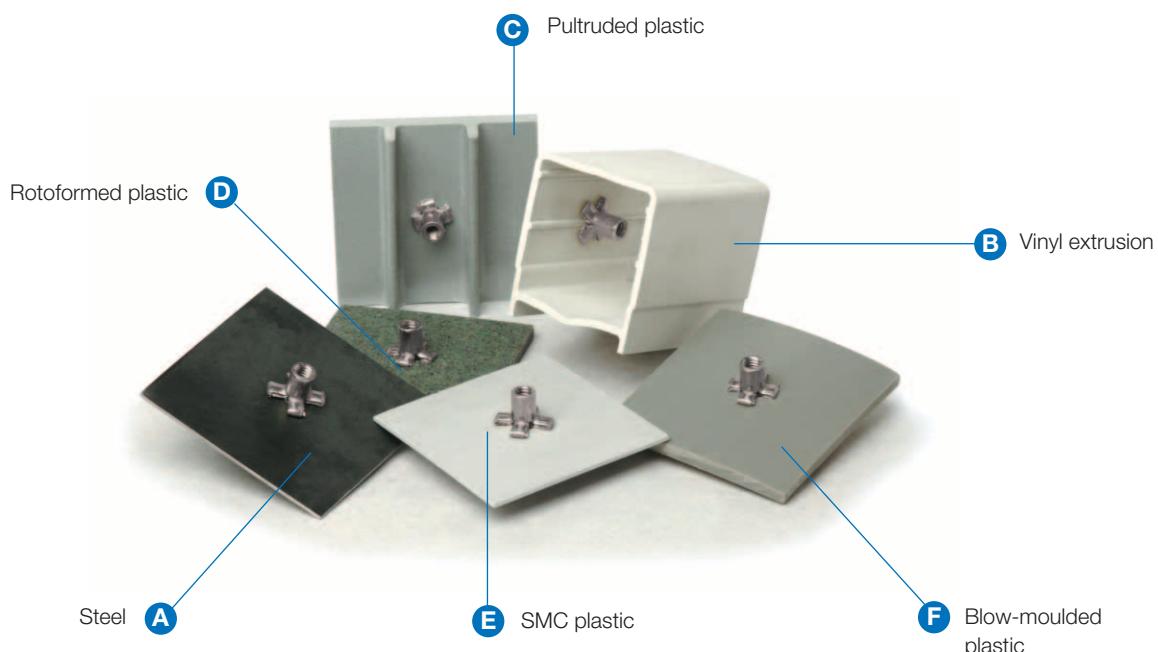

Extreme versatility in terms of thickness and diameter

The main difference of this RIVKLE® fastener is its slotted body which allows a petal-shaped deformation during the setting operation, thereby forming a large-size abutment. Its specific design allows it to accept large variations of the thickness of the support and/or variations of the diameter of the hole.

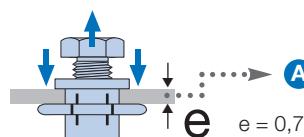

Advantages

- A great number of applications can be covered with a single product.
- You can counterbalance the variations of thickness and hole diameter which result from your process (plastic parts, plies, etc.).
- Secure your assemblies on thin plates or soft materials thanks to a large-size abutment.

Mechanical performance

RIVKLE® PN - Tooling

Please use dedicated tooling, see page 60.

RIVKLE® Seal Ring nuts and studs and other sealed solutions

Tightness in all circumstances

Preserve your assemblies from external influences.

This insert leaves no room for compromise and ensures sealing against all fluids while retaining the performance of RIVKLE® over time (metal-to-metal contact). All our products are proof tested with air pressure in accordance with stringent process (ATEQ) and comply with the highest demands from automotive industry.

Advantages

- Simplify your sealed assemblies with a solution directly integrated into your RIVKLE® nuts or studs.
- Ensure systematic and repeatable sealing and preserve the mechanical performance of your assemblies.
- Keep enjoying the advantages of a simple and quick installation process with access from only one side. Compatible with all Böllhoff setting tools, including for automatic blow-feed installation*.

*The fluid tightness properties of the product require compliance with the specified setting conditions, both in terms of equipment and support.

(For more information about the setting conditions, refer to page 8 and/or contact Böllhoff).

New

RIVKLE® Seal Ring - Steel

The RIVKLE® Seal Ring range is available with NBR seals for temperature stability from -30°C to +100°C.

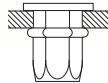

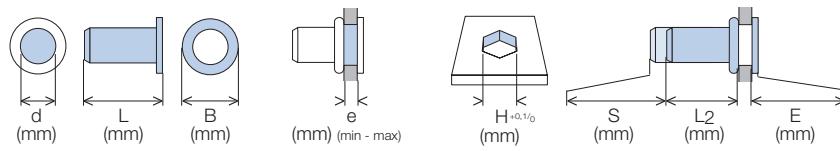

The RIVKLE® Seal Ring range is also available with FKM seals for a temperature stability from -15°C to +220°C (cataphoresis passage).

On request, please contact Böllhoff.

236 156 01000

Tooling not included (see page 59)

Maximum stroke	7,0 mm
Maximum setting force	21 kN (from M4 to M10 steel)
Operating air pressure	5,5 bar min to 7 max
Weight without tooling	2,2 kg
Noise level	< 70 dB (A)
Production rate	32 RIVKLE® /min

Generic code for a tool with unique force cartridge:

282 520 00 005.

It is also possible to get mono cartridge alone.

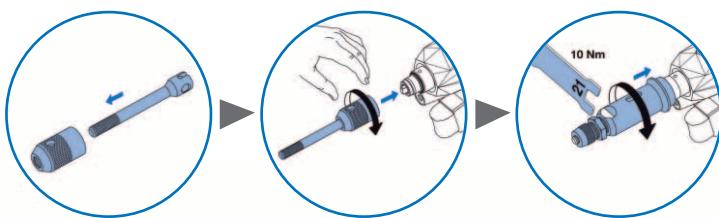

Please contact Böllhoff.

RIVKLE® NEO P107 – Hydraulic/pneumatic setting tool for RIVKLE® blind rivet nuts and studs

Quick replacement of tooling

- Use of existing mandrels and anvils
- Easier tool replacement

Force adjustment

- No more untimely misadjustment
- Greater accuracy

Ergonomics consistent with Böllhoff standards

- Redesigned trigger (no pinching)
- Comfortable and ergonomic handle

Your advantages

3 kN to 18 kN (M3-M8 steel)

36 RIVKLE® / min (record)

Optimised maintenance (easier and faster)

Designed and validated for large series use

Compatible with existing RIVKLE® tools (mandrels and anvils)

For RIVKLE® blind rivet nuts and studs

**Central air connection**

- Suited to right-hand and left-hand use

Maintenance videos
Tool videos

**Air-operated return**

- Redesigned to improve speed

Developed and produced
in France

RIVKLE® – Force Controller

The RIVKLE® technology guarantees that each fastener will be properly set during the process.

This non-destructive test is carried out as a background task during the setting process.

This validation of the setting parameters and conditions is available on the hand setting tools and the automatic setting tools as well.

Hand setting tools

The **RIVKLE® FC340 Force Controller** is the most reliable solution to allow you to check that your hand setting tools are correctly adjusted and deliver the suitable setting forces for your application. This controller ensures compliance with the 3rd condition of the RIVKLE® setting parameters.

Digital display

Instant reading of the setting force applied by the tool

Hydraulic pressure sensor

Measurement accuracy: +/-3%

Enclosed hydraulic module

High capacity (-> 40 kN) and repeatability over time

Checking tools

Suitable for the setting of studs and nuts.
Suitable for the setting of M3 to M16 fasteners.

This tool is available with or without calibration certificate.

RIVKLE® – Special installation machines**RIVKLE® EPK C / RIVKLE® EPK HP**

Hydraulic pneumatic tool with process control

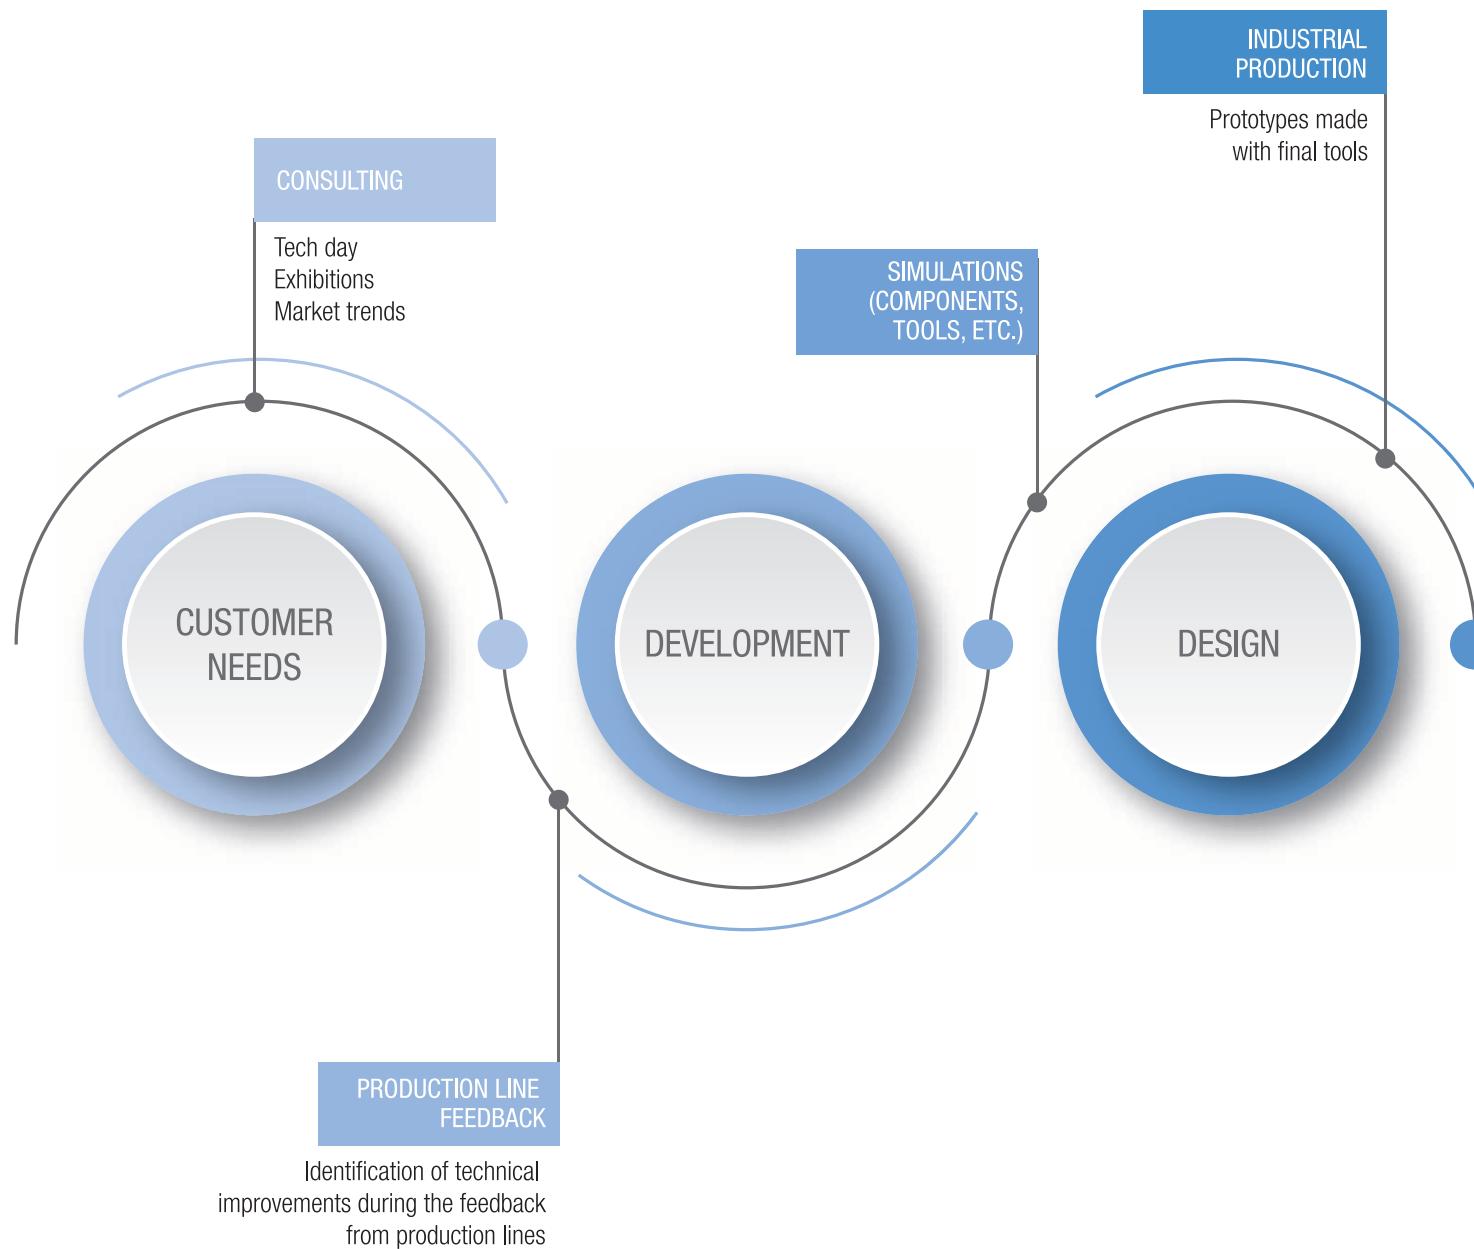

**RIVKLE® Automation**

Setting head with automatic loading system

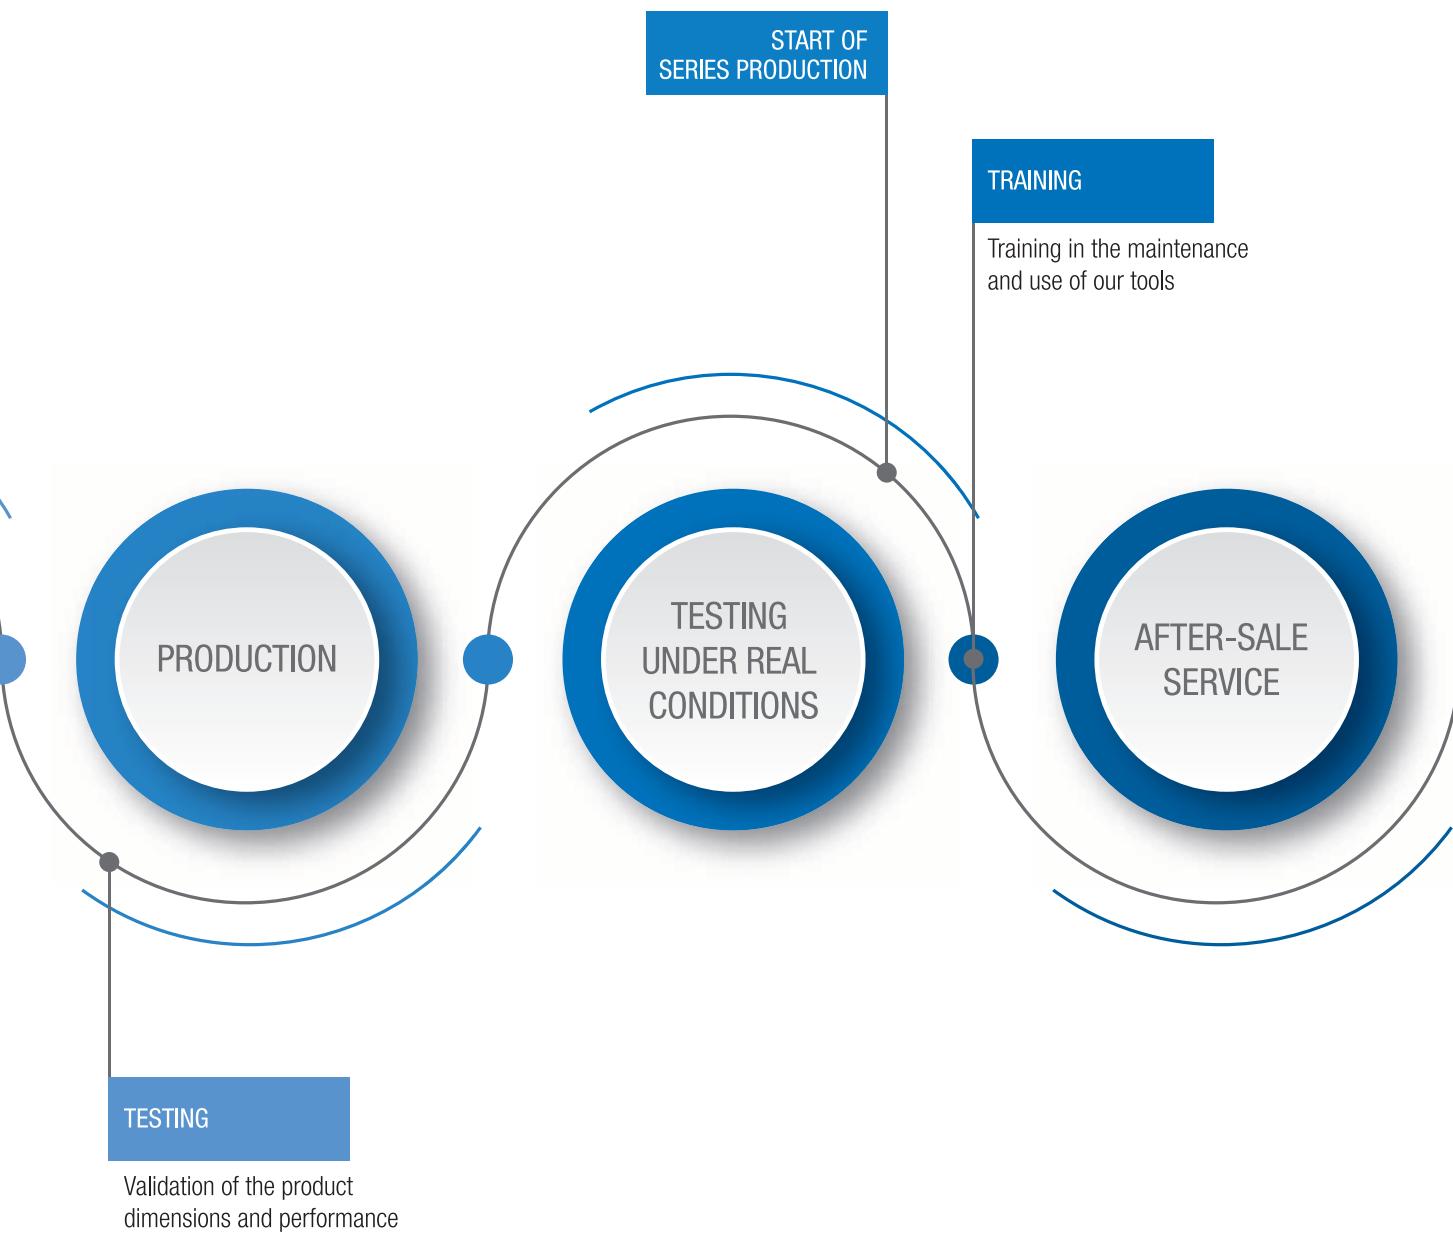

BÖLLHOFF is the only supplier for your assembly components and associated tools

provides you with comprehensive assistance. Thanks to our fully in-house expertise, we will support and guide you, from the stages before your design to the industrial production stage and including to provide you with training in the setting methods.

We have the expertise for each step related to your project: consulting, development, design, prototyping.

BÖLLHOFF is the only supplier for your assembly components and associated tools
